

PROCORE[®]

SQL Replicator

Real Time Data Replication between Procore and SQL Server

Companies should have total control of their data to do with and what they want with it. Having the ability to use standard industry reporting and business analytic tools such as SQL Reporting Services, Tableau, Microsoft Power BI and Microsoft Office to name a few is critically important to managing a business in today's fast pace world. With the 'Procore SQL Replicator', as data is entered into Procore it is replicated to a SQL Server database generally within one minute or less.

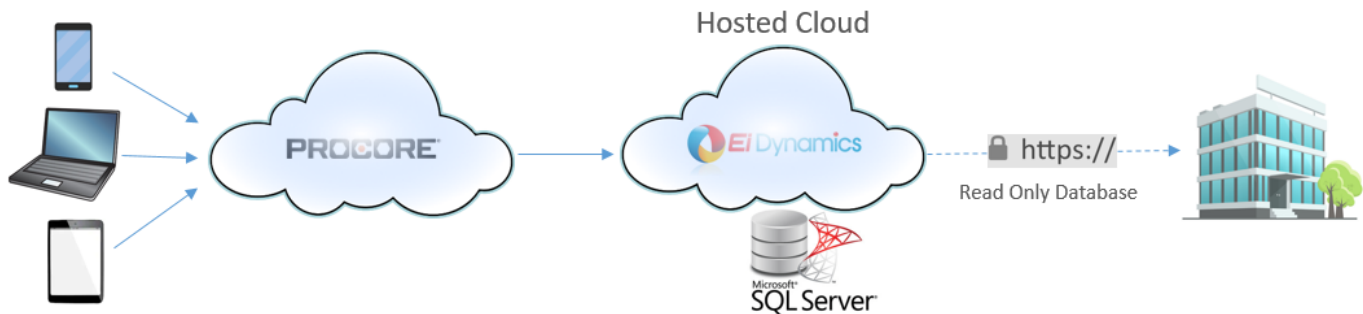

- Virtually every resource in Procore is available for replication
- On premise and Hosted options available
- On demand and scheduled replication options are also available
- Simple user interface allows resources to be added and removed with a click of the mouse

PROCORE[®]

SQL Replicator

Hosted Option:

Pro's:

- No setup or installation required
- Bug fixes and enhancements are seamless
- Hosted in a state of the art hosting center for optimal up time, reliability and fast internet speeds
- Can be natively embeded within Procore as an 'Embedded App' for quicker, easier and more seamless access
- Month-to-Month payment option available

Con's:

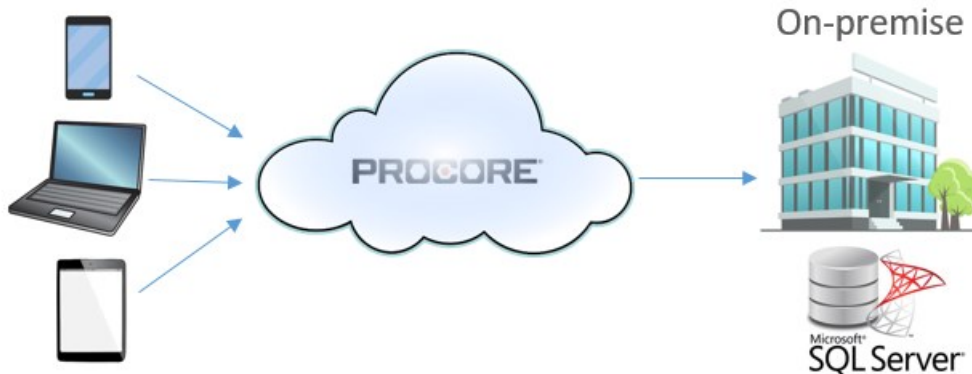

- SQL Database is read only so no custom indexes or optimizations are allowed
- Depending on download internet speeds, data query performance may vary

PROCORE[®]
